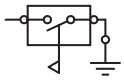
Symbols and Definitions

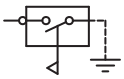
Fuse: A component in an electrical circuit that will open the circuit if too much current flows through it.

Switch (Normally Open): A switch that will close at a specified point (temp, press, etc.). The circle indicates that the component has screw terminals and a wire can be disconnected from it.

Switch (Normally Closed): A switch that will open at a specified point (temp, press, etc.). No circle indicates that the wire cannot be disconnected from the component.

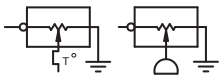


Ground (Wired): This indicates that the component is connected to a grounded wire. The grounded wire is fastened to the machine.

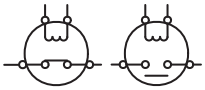


Ground (Case): This indicates that the component does not have a wire connected to ground. It is grounded by being fastened to the machine.

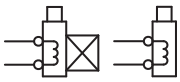
Reed Switch: A switch whose contacts are controlled by a magnet. A magnet closes the contacts of a normally open reed switch; it opens the contacts of a normally closed reed switch.



Sender: A component that is used with a temperature or pressure gauge. The sender measures the temperature or pressure. Its resistance changes to give an indication to the gauge of the temperature or pressure.



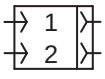
Relay (Magnetic Switch): A relay is an electrical component that is activated by electricity. It has a coil that makes an electromagnet when current flows through it. The electromagnet can open or close the switch part of the relay.



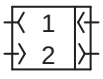
Solenoid: A solenoid is an electrical component that is activated by electricity. It has a coil that makes an electromagnet when current flows through it. The electromagnet can open or close a valve or move a piece of metal that can do work.

Magnetic Latch Solenoid: A magnetic latch solenoid is an electrical component that is activated by electricity and held latched by a permanent magnet. It has two coils (latch and unlatch) that make electromagnet when current flows through them. It also has an internal switch that places the latch coil circuit open at the time the coil latches.

Harness and Wire Symbols



Deutsch connector: Typical representation of a Deutsch connector. The plug contains all sockets and the receptacle contains all pins.



Sure-Seal connector: Typical representation of a Sure-Seal connector. The plug and receptacle contain both pins and sockets.

Failure Mode Identifiers (FMI)[1]	
FMI	**Failure Description**
0	Data valid but above normal operating range
1	Data valid but below normal operating range
2	Data erratic, intermittent or incorrect
3	Voltage above normal or shorted high
4	Voltage below normal or shorted low
5	Current below normal or open circuit
6	Current above normal or grounded circuit
7	Mechanical system not responding properly
8	Abnormal frequency, pulse, or period
9	Abnormal update rate
10	Abnormal rate of change
11	Failure mode not identifiable
12	Bad device or component
13	Out of calibration
14	Special Instruction
15	Data valid but above normal operational range
16	Data valid but above normal operational range
17	Data valid but below normal operational range
18	Data valid but below normal operational range
19	Received network data in error

NOTES:

(1) For the Machine ECM, the MID is 039. This table pertains only to faults with a MID of 039.

The CID is a diagnostic code that indicates which circuit is faulty.

The MID is a diagnostic code that indicates which electronic control module.

Machine ECM Event Codes

Event Codes for the Machine ECM			
EID	**Warning Level**	**Description**	**Activation**
50(1)	1	High Voltage Level 1 Event	1. Start-up delay timer is expired (30 sec) and 2. Engine speed is greater than 800 RPM and 3. System Voltage is greater than 14.8 VDC to activate (less than 14.5 VDC to deactivate) and 4. Debounce status is TRUE.
50(1)	3	High Voltage Level 3 Event	1. System Voltage is greater than 16 VDC to activate (less than 15.8 VDC to deactivate) and 2. Debounce status is TRUE.
153	3	High speed directional shift	1. Ground speed is greater than 16 km/h (10 mph) and 2. A shift in direction is requested by the operator. A “Shift in Direction” is defined as: 1. Shift from Fwd to Rev 2. Shift from Rev to Fwd 3. Shift out of neutral
172	5 min	Air Inlet Restriction	The air filter is restricted.
282(1)	2	Hydraulic Oil Filter Bypass Event	1. Hydraulic oil temperature is greater than 42 °C (108 °F) (Temp Limit) or Hydraulic Oil Temp is unknown or Event is previously active and still in hysteresis(39 °C (102.2 °F)) and 2. The switch for the hydraulic filter is ACTIVE.
360		Low Engine Oil Pressure	The engine oil pressure is low enough to activate the engine oil pressure switch for 3 seconds and the engine is not running.
361		High Engine Coolant Temperature	The engine coolant temperature is greater than 113 °C (235 °F) for 3 seconds.
627(1)	2	Machine Driven with Parking Brake ON	1. The ground speed is greater than 1 km/h (0.6 mph) in forward or reverse and
			2. The Parking Brake switch is closed for 1 second.
797(2)	1	Brake Boost Low Pressure Level 1 Event	1. Fluid level / pressure for the brake is low and 2. Engine speed is less than 800 RPM.
797(1)	3	Brake Boost Low Pressure Level 3 Event	1. Fluid level / pressure for the brake is low and 2. Engine speed is greater than 800 RPM.
861(1)	1	Machine Synchronize clock Manual Alignment	The SYNC Clock requires Manual Adjustment.
875(1)	1	Low Voltage Level 1 Event	1. Start-up delay timer is expired (30 sec) and 2. Engine speed less than 400 RPM and 3. System Voltage is 12.3 -12.5 VDC and 4. Debounce status is TRUE (8 minute debounce on bench test). OR 1. Start-up delay timer is expired (30 sec) and 2. Engine speed greater than 1300 RPM and 3. System voltage is 12.4 -13 VDC and 4. Debounce status is TRUE.
875(1)	2	Low Voltage Level 2 Event	1. Start-up delay timer is expired (30 sec) and 2. Engine is running and 3. Engine speed less than 1300 RPM and 4. System Voltage is 12.4 -13 VDC and 5. Debounce status is TRUE. OR 1. Start-up delay timer is expired (30 sec) and 2. Engine is running and 3. System voltage is 12 -12.3 VDC and 4. Debounce status is TRUE.
875(1)	3	Low Voltage Level 3 Event	1. Start-up delay timer is expired (30 sec) and 2. Engine speed is greater than 800 RPM and 3. System Voltage is 11.5 or 11.8 VDC and 4. Debounce status is TRUE.
878(1)	2	High Hydraulic Oil Temperature Event	1. Hydraulic oil temperature is greater than 110 °C (230. °F) and 2. ON delay timer (3 min) is expired.
