

This electronic  
**CRANE RATING MANUAL**  
is  
**“FOR REFERENCE ONLY”**

The lift capacity information with serial number, that is located on the capacity plate or in the Crane Rating Manual affixed in the crane operator's cab, supersedes all other lift capacities.

This document and all other lift capacity information are for reference only.

Notice: The referenced lift capacities contained herein are only for the crane with the serial number that appears at the bottom of each page.

# **WARNING**

**READ AND UNDERSTAND THE OPERATOR'S AND SAFETY MANUALS AND THE FOLLOWING INSTRUCTIONS AND RATED LIFTING CAPACITIES BEFORE OPERATING THE CRANE. OPERATION WHICH DOES NOT FOLLOW THESE INSTRUCTIONS MAY RESULT IN AN ACCIDENT.**

## **Operating Instructions**

### **General:**

1. Rated lifting capacities in kilograms as shown on lift charts pertain to this crane as originally manufactured and normally equipped by Link-Belt Construction Equipment Company (LBCE). Modifications to the crane or use of optional equipment other than that specified can result in a reduction in capacity.
2. Construction equipment can be dangerous if improperly operated or maintained. Operation and maintenance of this crane must be in compliance with the information in the Operator's, Parts, and Safety Manuals supplied with this crane. If these manuals are missing, order replacements through the distributor.
3. The operator and other personnel associated with this crane shall read and fully understand the latest applicable American National Standards Institute (ANSI) and American Society of Mechanical Engineers (ASME) safety standards for cranes.
4. All rated lifting capacities listed in this Crane Rating Manual are in compliance with ANSI/ASME B30.5, SAE J1063, and SAE J765 in effect at the time of manufacture.
5. The rated lifting capacities are based on crane standing level on firm supporting surface.

### **Set Up:**

1. The crane shall be leveled on a firm supporting surface. Depending on the nature of the supporting surface, it may be necessary to have structural supports under the outrigger pontoons or tires to spread the load to a larger bearing surface.
2. When making lifts on outriggers, all tires must be free of supporting surface. All outrigger beams must be extended to the same length; fully retracted, intermediate extended, or fully extended.
3. When making lifts on tires, they must be inflated to the recommended pressure. (See "Tire Inflation".)
4. For required parts of line, see "Wire Rope Capacity Chart" and "Winch Performance".
5. Before setting up the crane, refer to "Allowable Crane Configurations" and rated lifting capacities to determine allowable crane configurations.

### **Operation:**

1. Rated lifting capacities at rated radius shall not be exceeded. Do not tip the crane to determine allowable loads.
2. Rated lifting capacities shall be reduced for repetitive lift applications. For concrete bucket operation, weight of bucket and load shall not exceed 80% of rated load. For duty cycle operation, such as loading and unloading, maximum allowable load shall not exceed 70% of rated load. For clamshell and magnet operation, weight of bucket, or magnet, and load shall not exceed 70% of rated load. Lifts with fly erected are prohibited for clamshell and magnet operation.
3. Rated lifting capacities shown on fully extended outriggers do not exceed 85% of the tipping loads. Rated lifting capacities shown on intermediate extended or fully retracted outriggers are determined by the formula, rated load = (tipping load - 0.1 X load factor)/1.25. Rated lifting capacities shown on tires do not exceed 75% of the tipping loads. Tipping loads are determined by SAE crane stability test code SAE J765.
4. Rated lifting capacities in the shaded areas are governed by factors other than those that would cause a tipping condition.
5. Rated lifting capacities include the weight of the hook block, hook ball, slings, bucket, magnet, auxiliary lifting devices, etc. Their weights must be subtracted from the listed rated capacity to obtain the net load which can be lifted. Rated lifting capacities include the deduct for fly stowed on the base of the boom. For deducts of any fly erected, but not used, see "Capacity Deductions".
6. Rated lifting capacities are based on freely suspended loads. No attempt shall be made to move a load horizontally on the ground in any direction.
7. Rated lifting capacities are for lift crane service only.
8. Do not operate at radii or boom lengths (minimum or maximum) where capacities are not listed. At these positions, the crane can tip or cause boom failure.
9. The maximum loads which can be telescoped are not definable because of variation in loadings and crane maintenance, but it is permissible to attempt retraction and extension within the limits of the applicable load rating chart.

**SN: S4K8-4536**

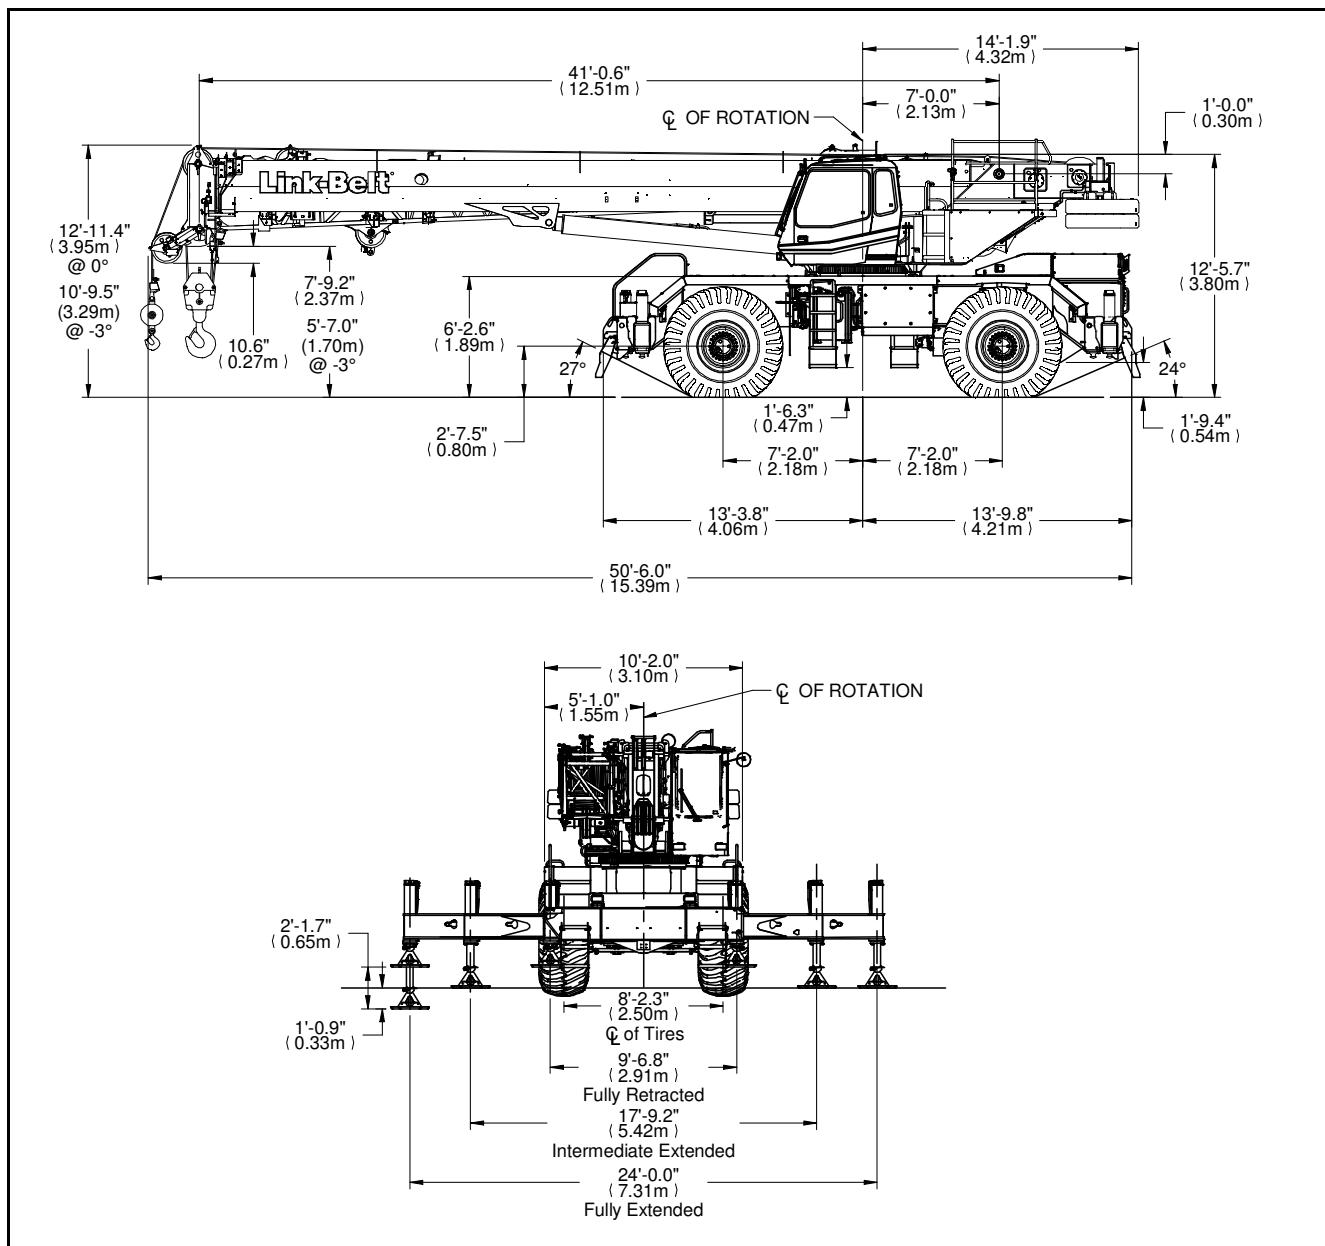

10. Main boom capacities and offset fly capacities are determined by radius and boom length. When either boom length or radius, or both are between values listed, proceed as follows:
  - a. For boom lengths not listed, use rating for next longer boom length or next shorter boom length, whichever is smaller.
  - b. For load radii not listed, use rating for next larger radius.
11. The user shall operate at reduced ratings to allow for adverse job conditions such as: soft or uneven ground, out of level conditions, wind, side loads, pendulum action, jerking, or sudden stopping of loads, hazardous conditions, experience of personnel, traveling with loads, electrical wires, etc. Side load on boom and/or fly is dangerous and shall be avoided.
12. Rated lifting capacities do not account for the effects of excessive wind on a suspended load or boom. See "Wind Speed Restrictions" for allowed wind speed operation and appropriate capacity reduction.
13. For cold weather operation, rated capacities should be reduced by the following rule: a 1% reduction in rated capacity should be taken for each 1°F (.6°C) below 0°F (-18°C). Example: if the temperature is -10°F (-23°C) a 10% reduction in rated capacities should be taken, at -40°F (-40°C) a 40% reduction.
14. Heat from the sun only on one side of the boom may cause a temperature differential in the sides of the boom. The thermal effects may cause the boom to distort (bend to one side) creating a side load on the boom and/or fly. Side loading is dangerous and shall be avoided. Refer to the Operator's Manual for more instructions.
15. For auxiliary lifting sheave capacities, use main boom charts minus auxiliary lifting sheave deduct. (See "Capacity Deductions".) The effective length of the boom increases by .61m.
16. The power sections of the boom, for the selected boom mode, must be extended and retracted equally.
17. Rated lifting capacities are based on correct reeving. A deduction must be made for excessive reeving. Any reeving over minimum required is considered excessive and must be accounted for when making lifts. Use the Working Range Diagram to estimate the extra length of rope, then deduct the required rope weight (listed on the Wire Rope Capacity Chart) for the extra length of wire rope before attempting to lift a load.
18. The loaded boom angle combined with the boom length gives only an approximation of the operating radius. The boom angle, before loading, should be greater to account for deflection. Some capacities are limited by a maximum obtainable 80° boom angle.
19. The 12.50m boom length structural lifting capacities are based on boom fully retracted. If the boom is not fully retracted, do not exceed capacities shown for the next boom length.
20. Rated lifting capacities on tires depend on tire capacity, condition of tires, and tire air pressure. On tire capacities require lifting from main boom head only with the crane supported on a smooth, firm, and level surface. Pick and carry operations are restricted to speeds of 4km/h and creep. For pick and carry operation, the boom must be centered over the front of the crane with two position travel swing lock engaged and the load must be restrained from swinging. Lifts on tires with any fly erected are prohibited. For correct tire pressure, see "Tire Inflation".

#### **Definitions:**

1. **Loaded Boom Angle In Degrees:** The angle between the boom base section and horizontal with freely suspended load at the rated radius.
2. **Load Radius:** Horizontal distance from a projection of the axis of rotation to the supporting surface, before loading, to the center of the vertical hoist line or tackle with load applied.
3. **Working Area:** Area measured in a circular arc about the centerline of rotation as shown on the Working Areas Diagram.
4. **Freely Suspended Load:** Load hanging free with no direct external force applied except by the hoist line.
5. **Side Load:** Horizontal side force applied to the lifted load either on the ground or in the air.
6. **No Load Stability Limit:** The radius or boom angle beyond which it is not permitted to position the boom because the crane can overturn without any load on the hook.
7. **Load Factor:** Load applied at the boom tip which gives the same moment effect as the boom mass.
8. **Creep:** Crane movement limited to 61m in a 30 minute period and not to exceed .4m/sec (1.6km/h) maximum speed.

**SN: S4K8-4536**

## General Dimensions

## Tire Inflation

Tire Size	Operation	Tire Pressure (kPa)
29.5 x 25	Stationary	517

Rope Weight (kg/m)	1.8	1.9	1.6	1.8	N/A
LBCE Type	Description				
RB	18 x 19 Rotation Resistant - Compacted Strand - High Strength, Preformed, Right Regular Lay				
ZB	34 x 7 Non-Rotating, E.I.P.S., Right Regular Lay or Right Lang Lay				
GC	4 Strand, Low Torque, Compacted Strand, Right Regular Lay				
YB	34 x 7 Rotation Resistant - WSC - Compacted Strand - Right Lang Lay				
KC	37 x 7 Rotation Resistant, Non-Rotating, Galvanized, Right Lang Lay				

\* Available low speed winch pull on fourth layer wire rope

### Notes:

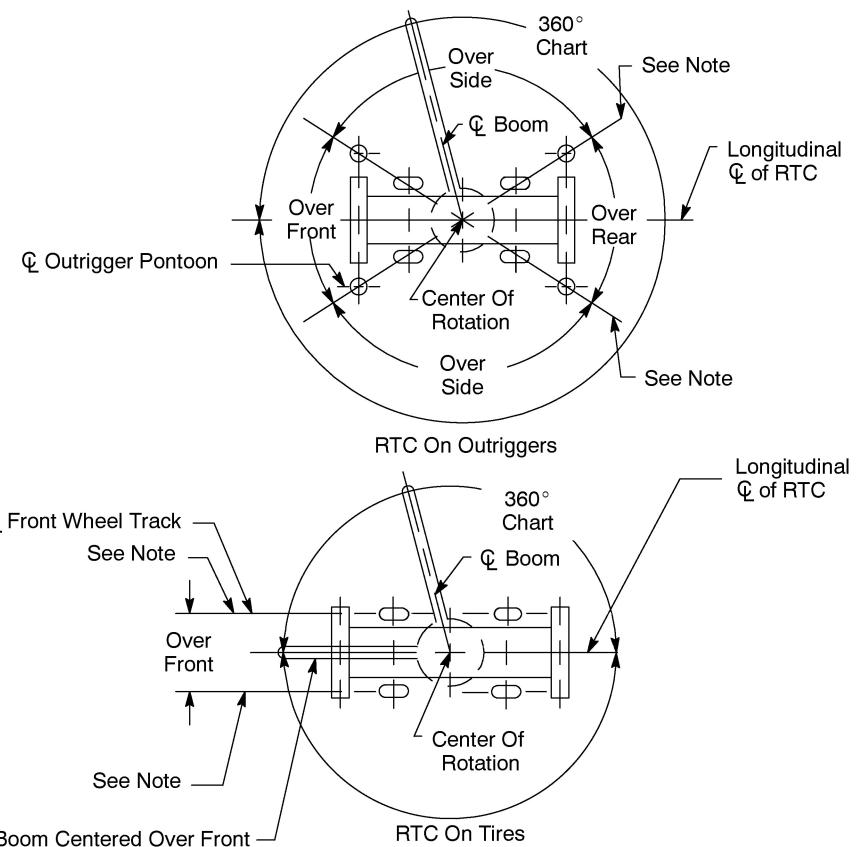

1. Capacities shown are in kilograms and working loads must not exceed the ratings on the capacity charts in this Crane Rating Manual.
2. Capacity deducts for auxiliary lifting devices do not apply for wire rope strength capacities.
3. Special reeving, using the auxiliary sheave, is required when using more than 10 parts of line.
4. Consult Operator's Manual for wire rope inspection procedures, single part of line applications, and reeving diagrams.
5. If the wire rope single line pull is greater than the 4th layer winch line pull, the winch could stall when lifting rated loads. It is recommended that the 4th layer winch line pull be used to calculate the required parts of line to make lifts.

If using other than the 4th layer, calculate per the follow examples:

Using the 1st layer line pull to lift from: (Load(kg)/8 391=Parts of line)

Using the 5th layer line pull to lift from: (Load(kg)/6 236=Parts of line)

## Working Areas

Note: These lines determine the limiting position of any load for operation within working areas indicated.

## Backward Stability - Maximum Boom Angle

Counterweight (t)	Tires			Fully Retracted Outriggers *
	Side	Front	Rear	
0	80°	80°	80°	80°
4.4	75°	80°	80°	80°
8.8	60°	80°	80°	75°

\* Maximum boom angle is based on retracted boom at the least stable over side position

**SN: S4K8-4536**

## Capacity Deductions

Load Handling Equipment	Weight (kg)
22.7t Quick Reeve 1 Sheave Hook Block (See Hook Block For Actual Weight)	340
36.3t Ton Quick Reeve 4 Sheave Hook Block (See Hook Block For Actual Weight)	408
54.4t Quick Reeve 4 Sheave Hook Block (See Hook Block For Actual Weight)	503
54.4t Quick Reeve 5 Sheave Hook Block (See Hook Block For Actual Weight)	500
73.0t Quick Reeve 5 Sheave Hook Block (See Hook Block For Actual Weight)	638

8.5m Fly Center Erected But Not Used	<b>Prohibited</b>
7.9m Fly Tip Erected But Not Used	<b>Prohibited</b>
7.9m Fly Tip Stowed On 11.6m Fly	<b>Prohibited</b>
Note: Capacity deductions are for Link-Belt supplied equipment only.	

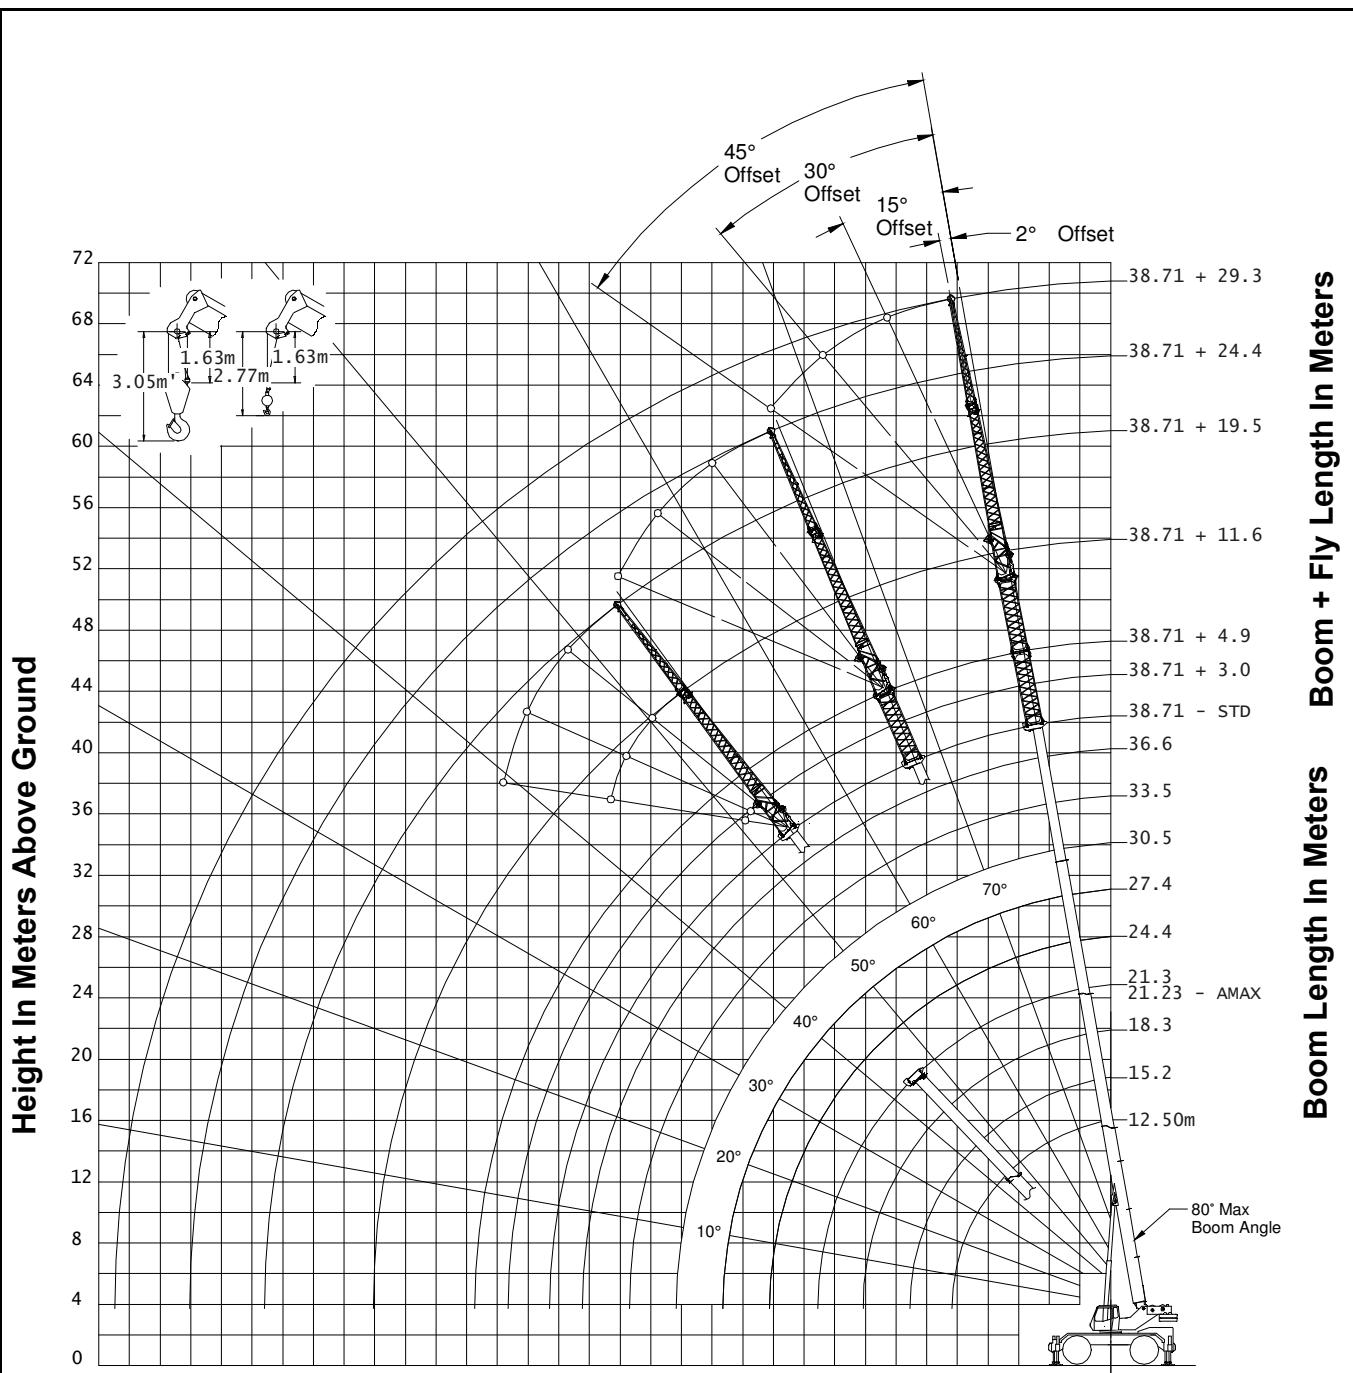

## Wind Speed Restrictions

If The Wind Speed Is:	Rated Capacities Must Be Reduced By At Least:
0 - 32km/h	Normal Lifting Operations (See Capacity Charts)
33 - 47km/h	40%
48 - 63km/h	70%
64km/h or Greater	Crane operation must be shutdown and the boom retracted and lowered to horizontal.

\* Additional reductions are required for loads with large wind sail area.  
 \* These restrictions are based on crane on fully extended outriggers.  
 \* When wind speed for normal operation is exceeded, the operator shall add 10° to all minimum boom angles due to no load stability and shall not boom down below that angle.

SN: S4K8-4536

# Working Range Diagram

## Operating Radius From Centerline Of Rotation In Meters

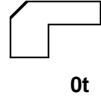

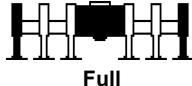

Note: Boom and fly geometry shown are for unloaded condition and crane standing level on firm supporting surface. Boom deflection, subsequent radius, and boom angle change must be accounted for when applying load to hook.

## WARNING

Do not lower the boom below the minimum boom angle for no load stability as shown in the lift charts for the boom lengths given. Loss of stability will occur causing a tipping condition.

## ⚠ WARNING

Do Not Raise Boom Above 75° Boom Angle, Loss of Backward Stability Will Occur Causing a Tipping Condition.
