Fitting Assembly Instruction NS Style Profile - Dull Green Colored

NOTE!

The Walterscheid profile ring fittings are coated with a clear sliding agent which reduces friction and avoids the need to additionally oil the fittings components.

In order to ensure positive assembly, WALTERSCHEID fittings should always be pre-assembled using a spare mating fitting. After pre-assembly, discharge the spare fitting.

In case of repair, direct assembly in the pre-assembly adapter is also possible

Direct Assembly

1. Saw off the tube at right angles and debur it. Do not use a tube cutter, but a sawing machine, if possible. Lightly debur tube ends at inside and outside.

2. Place the nut and profile ring on the tube as shown.

3. Press tube into fitting body up to tube abutment. tighten nut by hand.

4. Tighten nut until ferrule grips tube which is felt by a noticeable increase in torque.

5. Final assembly by 1 turn.

Important: Hold fitting body firmly by means of a spanner.

Application of deviating numbers of tightening turns reduces the nominal pressure rating and the life of the fitting which causes leakages or displacement of the tube.

6. Check penetration of cutting edge. A visible ring of material should fill the space in front of the profile ring end face. Profile ring may turn tube but should not be capable of axial displacement.
